

Comcast Internet Proposal

This proposal will reduce the cost we are currently paying to Comcast while increasing our total bandwidth. Our current monthly charges are \$379.90 for a 100/10 megabit line from Comcast. Our current plan is no longer offered by Comcast, instead they have two other plans both offering slightly more bandwidth for less than we are paying now. I am proposing that we switch to one of these plans saving anywhere from \$129 - \$179 per month.

The first option would be to be \$199/month for a 100/20 megabit connection, This will give us about twice as much upload bandwidth as we have now but our download will be the same. The second option and the one I would recommend is to switch to their 150/20 megabit tier. This will cost us \$250/month, but in addition to doubling our current upload speed will also increase the maximum download speed as well.

Current Tier	100/10 megabits	\$379.90/mo
Option 1	100/20 megabits	\$199.95/mo (save \$179.95/mo)
Option 2	150/20 megabits	\$249.95/mo (save \$129.95/mo)
